

EndRot Borate Powder

Description:

EndRot Borate Powder is an EPA registered insecticide and fungicide for the control of wood destroying insects and rot. Use EndRot Borate Powder in combination with the other System Three rot restoration products.

Features:

- Dissolves easily in warm water
- Odorless in solution
- Penetrates deep into wood
- Solvent free

Coverage:

2 oz package + 16 oz. of water = 20 sq. ft. of coverage
1 lb. package + 128 ounces of water = 150 sq. ft. of coverage
1.5 TBSP EndRot Borate Powder to 1 oz. of water covers approximately 1 sq. ft.

Measuring And Mixing:

Using disposable safety gloves, measure the appropriate amount of EndRot Borate Powder and warm water. Mix until the powder completely dissolves.

Borates, when mixed with water, have an unlimited shelf life. Because of this, you can store any remaining solution in an airtight container for future use.

Applying EndRot Borate Powder

Apply the borate solution with a brush or large pump style bug sprayer. Saturate the rotted/infested wood.

Since borates are water soluble, treated wood components with ongoing exposure to moisture will require periodic maintenance applications.

Cleanup:

Water cleanup.
